SUMMARY

Computer Science graduate (B.Tech, Data Science) with hands-on experience building a Snowflake-based data platform, including ETL pipeline design, data modeling, and warehouse integration for analytics use cases. Practical experience with Talend, SQL, and Python for data ingestion and transformation, and Tableau for downstream reporting. Currently progressing through Snowflake's Hands-On Essentials learning series. Strong foundation in data engineering principles, with a focus on building scalable, reliable data platforms that support business-facing analytics. Eager to learn, build practical skills, and contribute as a Data Engineer.

EDUCATION

CMR College Of Engineering & Technology

2022 – 2026

B.Tech in Computer Science & Engineering (Data Science)

TECHNICAL SKILLS

Programming Languages: C, Python(Pandas, Numpy), SQL

Databases: MySQL, Snowflake, Firebase

Data Engineering: Data Validation, ETL Pipeline Development, Data Modeling, Data Reconciliation, ETL Testing

ETL Tools: Talend

Core CS: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Database Design, ETL Concepts

Tools: Git, GitHub, Tableau

Frameworks: Flask (Basic), React (Basic)

INTERNSHIP

EvoAstra Ventures Pvt. Ltd.

Jul 2025 – Aug 2025

Data Science Intern

Hyderabad

- Designed and deployed an end-to-end computer vision web application [[Captionize](#)] to generate automated text descriptions from image inputs.
- Structured and validated data ingestion pipelines for unstructured image data and flat files, testing model output accuracy against expected results
- Developed an interactive user interface enabling real-time image upload and caption display, improving user accessibility.

PROJECTS

Beyond Accuracy: Robust and Explainable IoT IDS [GitHub]

- Built a machine learning model to detect cyber-attacks in IoT network traffic.
- Trained and evaluated the model using the TON-IoT and BoT-IoT publicly available IoT security datasets.
- Used SHAP to understand how the model makes predictions.
- Presented the associated research paper at ICT4SD 2026; accepted for publication in ICT Analysis and Applications – Volume 9 (Springer Nature conference proceedings).

CAC Automation and Visualisation Platform [GitHub]

- Built an automated ETL pipeline using Talend to extract raw financial data from flat files (CSV/JSON) and load it into a Snowflake data warehouse.
- Streamlined Customer Acquisition Cost (CAC) aggregation, data cleaning, and transformations using Python and SQL scripts.
- Integrated interactive Tableau dashboards directly with Snowflake to present key business metrics visually for stakeholders.

NAV-Aisle Superstore

- Built a web-based 3D indoor navigation system for retail stores to optimize product discovery for customers.
- Implemented search indexing and route optimization algorithms to calculate shortest paths through store aisles.

CERTIFICATIONS & ACHIEVEMENTS

- Snowflake's Hands-On Essentials: Data Warehousing Workshop [[Badge 1](#)] & Collaboration, Marketplace & Cost Estimation Workshop [[Badge 2](#)] — Aug 2026 (Part of an ongoing multi-badge Snowflake learning series).
- AI Advanced – Python, Machine Learning, Deep Learning, Neural Networks, Artificial Intelligence ([Hexart.In](#)).
- Special Mention – Techknowthon'24.
- Participant – MAD Future Tech Expo 2.0 (VIT-AP).
